DETAILED ACTION

Response to Arguments

- 1. Applicants' arguments filed 4 October 2004 have been fully considered but they are not persuasive.
- 2. In response to Applicants' argument that Honkasalo does not disclose "transmitting a message indicative of the rate of said data prior to and independent of data transmission", the Examiner respectfully disagrees. According to Honkasalo the base station first assigns channels (which define a data rate as established in the previous Office action) to the mobile station, then the mobile station may transmit on those channels. Honkasalo explicitly states: "Once the multiple code channels are assigned, the mobile station 10 sends data on all assigned code channels." The mobile station sending data on the code channels meets the limitation of "data transmission". Honkasalo clearly discloses an assignment of a data rate prior to and independent of data transmission.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2665

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Honkasalo (US 6,137,789).

Regarding claim 1, Honkasalo discloses a mobile station for requesting multiple code channels for high speed data transmission. The mobile station requests a number of parallel code channels and a base station signals an assigned number of channels for a given period of time (col. 5, lines 58-67). Honkasalo shows data rates dependent on the number Supplemental Code Channels in Table 1 (col. 7, lines 1-12). The data rate of transmission is implicitly stated in the number of channels assigned to the mobile station by the base station. The assignment of a data rate is necessarily transmitted to the mobile station prior to and independent of data transmission. The base station must first transmit the assignment of channels before a mobile station can transmit data on those channels. Thus, the signaling of assigned channels and given period of time by the base station meets the limitations of transmitting a message indicative of the rate of said data prior to and independent of data transmission and the time interval over which data transmission will be transmitted.

Regarding claim 2, the frame type is inherent in the signaling of assigned code channels. Honkasalo discloses that supplemental code channels may be used by the mobile station to transmit high speed data. Thus, in response to a mobile station request, the signaling from the base station indicates the number of assigned supplemental code channels, whereby supplemental channel is the frame type.

Application/Control Number: 09/503,401

Art Unit: 2665

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Honkasalo (US 6,137,789).

Regarding claim 3, Honkasalo discloses signaling a data transmission rate, time interval and frame type from a base station to a mobile station (col. 5, lines 58-67; see also Table 1). Honkasalo fails to expressly disclose that the frame type is indicated by two bits and that the data transmission rate and time interval are both indicated by four bits. However, it is generally considered to be within the ordinary skill in the art to adjust, vary, select or optimize the numerical parameters or values of any system absent a showing of criticality in a particular recited value. The burden of showing criticality is on Applicant. In re Mason, 87 F.2d 370, 32 USPQ 242 (CCPA 1937); Marconi Wireless Telegraph Co. v. U.S., 320 U.S. 1, 57 USPQ 471 (1943); In re Schneider, 148 F.2d 108, 65 USPQ 129 (CCPA 1945); In re Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955); In re Saether, 492 F.2d 849, 181 USPQ 36 (CCPA 1974); In re Antonie, 559 F.2d 618, 195 USPQ 6 (CCPA 1977); In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). At the time the invention was made it would have been obvious to a person of ordinary skill in the art to use as many bits as necessary to indicate the frame type, data rate and time interval in the invention of Honkasalo. One of ordinary skill in the art would have been motivated to do this because the number of bits needed to indicate these values may be greater or Application/Control Number: 09/503,401

Art Unit: 2665

less than the specified number depending on the system implementation. For example, Honkasalo indicates that the data rate is specified by the number of supplemental channels that are assigned. If a maximum of eight channels may be assigned, then only three bits are necessary to indicate the data rate.

Conclusion

Any inquiry concerning this communication, or earlier communications from the 7. examiner should be directed to Thomas Volper whose telephone number is (571) 272-3151. The examiner can normally be reached between 8:30am and 5:00pm M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy Vu, can be reached at (571) 272-3155. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-2600.
